Summary of Alerts

| Risk Level | Number of Alerts |
|---------------|------------------|
| High | 0 |
| Medium | 5 |
| Low | 8 |
| Informational | 6 |

Alerts

| Name | Risk Level | Number of Instances |
|---|---------------|------------------------|
| Absence of Anti-CSRF Tokens | Medium | 13 |
| Content Security Policy (CSP) Header Not Set | Medium | 100 |
| Cross-Domain Misconfiguration | Medium | 1 |
| Missing Anti-clickjacking Header | Medium | 76 |
| Vulnerable JS Library | Medium | 4 |
| Application Error Disclosure | Low | 1 |
| Information Disclosure - Debug Error Messages | Low | 4 |
| Server Leaks Information via "X-Powered-By" HTTP Response Header Field(s) | Low | 1273 |
| Server Leaks Version Information via "Server" HTTP Response Header Field | Low | 1274 |
| Strict-Transport-Security Header Not Set | Low | 1264 |
| <u>Timestamp Disclosure - Unix</u> | Low | 2 |
| X-AspNet-Version Response Header | Low | 28 |
| X-Content-Type-Options Header Missing | Low | 1241 |
| Information Disclosure - Suspicious Comments | Informational | 82 |
| Modern Web Application | Informational | 74 |
| Re-examine Cache-control Directives | Informational | 71 |
| Retrieved from Cache | Informational | 9 |
| <u>User Agent Fuzzer</u> | Informational | 60 |

Alert Detail

| Medium | Absence of Anti-CSRF Tokens |
|---------------|---|
| | No Anti-CSRF tokens were found in a HTML submission form. |
| | A cross-site request forgery is an attack that involves forcing a victim to send an HTTP request to a target destination without their knowledge or intent in order to perform an action as the victim. The underlying cause is application functionality using predictable URL /form actions in a repeatable way. The nature of the attack is that CSRF exploits the trust that a web site has for a user. By contrast, cross-site scripting (XSS) exploits the trust that a user has for a web site. Like XSS, CSRF attacks are not necessarily cross-site, but they can be. Cross-site request forgery is also known as CSRF, XSRF, one-click attack, session riding, confused deputy, and sea surf. |
| Description | CSRF attacks are effective in a number of situations, including: |
| | * The victim has an active session on the target site. |
| | * The victim is authenticated via HTTP auth on the target site. |
| | * The victim is on the same local network as the target site. |
| | CSRF has primarily been used to perform an action against a target site using the victim's privileges, but recent techniques have been discovered to disclose information by gaining access to the response. The risk of information disclosure is dramatically increased when the target site is vulnerable to XSS, because XSS can be used as a platform for CSRF, allowing the attack to operate within the bounds of the same-origin policy. |

| Instances | 13 |
| Solution | Phase: Architecture and Design Use a vetted library or framework that does not allow this weakness to occur or provides constructs that make this weakness easier to avoid. For example, use anti-CSRF packages such as the OWASP CSRFGuard. Phase: Implementation Ensure that your application is free of cross-site scripting issues, because most CSRF defenses can be bypassed using attacker-controlled script. Phase: Architecture and Design Generate a unique nonce for each form, place the nonce into the form, and verify the nonce upon receipt of the form. Be sure that the nonce is not predictable (CWE-330). Note that this can be bypassed using XSS. Identify especially dangerous operations. When the user performs a dangerous operation, send a separate confirmation request to ensure that the user intended to perform that operation. Note that this can be bypassed using XSS. Use the ESAPI Session Management control. This control includes a component for CSRF. Do not use the GET method for any request that triggers a state change. Phase: Implementation |
| | Check the HTTP Referer header to see if the request originated from an expected page. This could break legitimate functionality, because users or proxies may have disabled sending the Referer for privacy reasons. |

| Solution | Ensure that your web server, application server, load balancer, etc. is configured to set the Content-Security-Policy header. |
| Reference | https://developer.mozilla.org/en-US/docs/Web/Security/CSP /Introducing Content Security Policy https://cheatsheetseries.owasp.org/cheatsheets/Content Security Policy Cheat Sheet.html https://www.w3.org/TR/CSP/ https://w3c.github.io/webappsec-csp/ https://web.dev/articles/csp https://caniuse.com/#feat=contentsecuritypolicy https://content-security-policy.com/ |

| Medium | Cross-Domain Misconfiguration |
|--|--|
| Description | Web browser data loading may be possible, due to a Cross Origin Resource Sharing (CORS) misconfiguration on the web server. |
| URL | https://cdnjs.cloudflare.com/ajax/libs/font-awesome/6.2.1/css/all.min.css |
| Method | GET |
| Attack | |
| Evidence | Access-Control-Allow-Origin: * |
| Other Info | The CORS misconfiguration on the web server permits cross-domain read requests from arbitrary third party domains, using unauthenticated APIs on this domain. Web browser implementations do not permit arbitrary third parties to read the response from authenticated APIs, however. This reduces the risk somewhat. This misconfiguration could be used by an attacker to access data that is available in an unauthenticated manner, but which uses some other form of security, such as IP address white-listing. |
| Instances | 1 |
| Solution | Ensure that sensitive data is not available in an unauthenticated manner (using IP address white-listing, for instance). Configure the "Access-Control-Allow-Origin" HTTP header to a more restrictive set of domains, or remove all CORS headers entirely, to allow the web browser to enforce the Same Origin Policy (SOP) in a more restrictive manner. |

|---|--|
| | Modern Web browsers support the Content-Security-Policy and X-Frame-Options HTTP headers. Ensure one of them is set on all web pages returned by your site/app. |
| Solution | If you expect the page to be framed only by pages on your server (e.g. it's part of a FRAMESET) then you'll want to use SAMEORIGIN, otherwise if you never expect the page to be framed, you should use DENY. Alternatively consider implementing Content Security Policy's "frame-ancestors" directive. |

| WASC Id | |
| Plugin Id | 10003 |
| _ | |
| Low | Application Error Disclosure |
| Description | This page contains an error/warning message that may disclose sensitive information like the location of the file that produced the unhandled exception. This information can be used to launch further attacks against the web application. The alert could be a false positive if the error message is found inside a documentation page. |
| URL | https://ggihaldia.com/frmEventCalendar.aspx |
| Method | GET |
| Attack | |
| Evidence | HTTP/1.1 500 Internal Server Error |
| Other Info | |
| Instances | 1 |
| Solution | Review the source code of this page. Implement custom error pages. Consider implementing a mechanism to provide a unique error reference/identifier to the client (browser) while logging the details on the server side and not exposing them to the user. |

|------------------------|---|
| Plugin Id | <u>10035</u> |
| 1 | Timestamp Disclosure - Unix |
| Low Description | A timestamp was disclosed by the application/web server Unix |
| URL | https://ggihaldia.com/UploadedFiles/804942AIntership%20Notice.pdf |
| Method | GET |
| Attack | GET |
| Evidence | 1611012017 |
| Other Info | 1611012017 1611012017, which evaluates to: 2021-01-19 04:50:17. |
| URL | https://ggihaldia.com/UploadedFiles/814614AProvisional%20Registration%20Nopdf |
| Method | GET |
| Attack | |
| Evidence | 1733720100 |
| Other Info | 1733720100, which evaluates to: 2024-12-09 10:25:00. |
| Instances | 2 |
| Solution | Manually confirm that the timestamp data is not sensitive, and that the data cannot be aggregated to disclose exploitable patterns. |

| Informational | Re-examine Cache-control Directives |
|---------------|---|
| Description | The cache-control header has not been set properly or is missing, allowing the browser and proxies to cache content. For static assets like css, js, or image files this might be intended, however, the resources should be reviewed to ensure that no sensitive content will be cached. |

| Solution | For secure content, ensure the cache-control HTTP header is set with "no-cache, no-store, must-revalidate". If an asset should be cached consider setting the directives "public, maxage, immutable". |
| Reference | https://cheatsheetseries.owasp.org/cheatsheets/Session_Management_Cheat_Sheet. html#web-content-caching https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Cache-Control https://grayduck.mn/2021/09/13/cache-control-recommendations/ |

| Informational | Retrieved from Cache |
|---------------|---|
| imormational | |
| Description | The content was retrieved from a shared cache. If the response data is sensitive, personal or user-specific, this may result in sensitive information being leaked. In some cases, this may even result in a user gaining complete control of the session of another user, depending on the configuration of the caching components in use in their environment. This is primarily an issue where caching servers such as "proxy" caches are configured on the local network. This configuration is typically found in corporate or educational environments, for instance. |

| Method | GET |
| Attack | |
| Evidence | Age: 2357 |
| Other Info | The presence of the 'Age' header indicates that a HTTP/1.1 compliant caching server is in use. |
| Instances | 9 |
| | Validate that the response does not contain sensitive, personal or user-specific information. If it does, consider the use of the following HTTP response headers, to limit, or prevent the content being stored and retrieved from the cache by another user: Cache-Control: no-cache, no-store, must-revalidate, private |
| Solution | Pragma: no-cache Expires: 0 This configuration directs both HTTP 1.0 and HTTP 1.1 compliant caching servers to not store the response, and to not retrieve the response (without validation) from the cache, in response to a similar request. |
